

Ten-0 slings with aluminium ferrules and soft eyes x 4.0m shown

We have personally used Superflex Slings from Andromeda Industries for almost twenty years. During this time they have provided exceptional service, longevity and reliability in trying conditions. Their construction is well suited to irregular shaped loads for both basket and choker configurations. The same can be said about the more recently introduced Flat Woven Slings. Should you be looking for a quality product that is more versatile than conventional wire rope and more robust than synthetic, we recommend Andromeda's Superflex and Flat Woven Slings.

SUPERFLEX STEEL SLINGS

Made from high tensile Superflex steel cable with supreme flexibility.

Suitable for straight, multi-leg, cradle and choker lifts to maximum cradle lift WLL of 55.7 tonnes.

Tapered steel ferrules available upon request. These are thinner than aluminium, suitable for underground, marine or caustic environments with no exposed wire tails for greater safety.
